Call for Contributions

The goal of the International Conference on Performance Engineering (ICPE) is to integrate theory and practice in the field of performance engineering by providing a forum for sharing ideas and experiences between industry and academia. ICPE is a joint meeting of the ACM Workshop on Software and Performance (WOSP) and the SPEC International Performance Evaluation Workshop (SIPEW). The conference brings together researchers and industry practitioners to share and present their experiences, to discuss challenges, and to report state-of-the-art and in-progress research on performance engineering. This year’s main theme is performance in the data center, in particular for hosting cloud applications and services.

Topics of Interest

- Performance in the data center, cloud, and Internet of Things
- Performance methods in software development
- Model-driven performance engineering
- Performance modeling and prediction
- Performance measurement and experimental analysis
- Benchmarks (workloads, scenarios, and implementations)
- Run-time performance and capacity management
- Performance in cloud, virtualized, and multi-core systems
- Performance-driven resource and power management
- Performance of big data systems
- Performance modeling and evaluation in other domains
- Performance requirements specification
